

7.1 Channel USB External Sound Card

Model: USB7.1

Description:

Replace a traditional sound card with this USB 2.0 audio adapter for your laptop or desktop PC. Featured with 100% USB plug & play capability and the easiest way to upgrade any on-board sound card with 7.1 Digital surround sound performance without any complicated hardware upgrade or configuration.

After plugging this USB audio adapter into a USB port, you can listen to stereo music or movies with the simulated sound of a surround-sound system using ordinary stereo headphones or stereo speakers.

Turn Your PC Into A Sound Recording System

You can record and edit meetings, memos, music and other audio sounds into your computer via this USB audio adapter. Monitor room sounds while using headphones. Connect a headset with microphone for use with Internet phone or online chat software.

Super Easy Installation

Just plug this audio adapter into a USB port and Windows will automatically install the driver for this new device in 5 seconds. And you have instantly upgrade your laptop PC with another audio input and output.

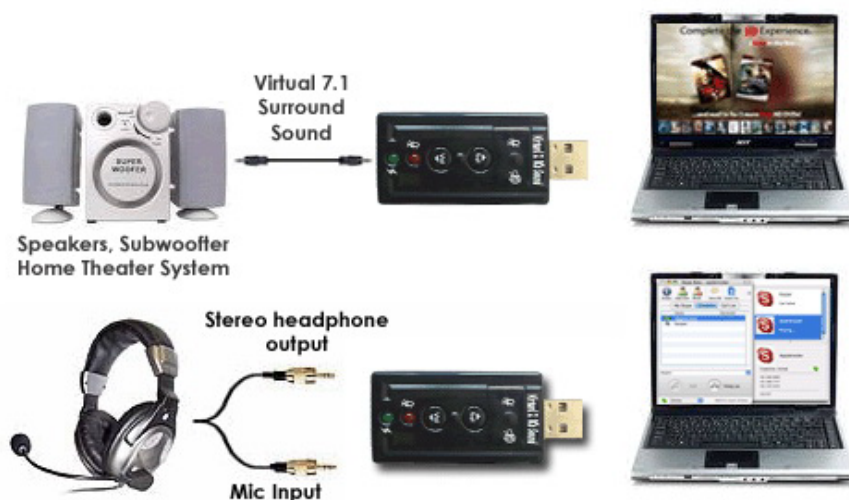

Built-in Surround Sound Simulator For Home Theater Experience

Music, movies and video games come alive on either multi-channel powered speakers or stereo headphones through this usb audio adapter. Users can configure this adapter to have many special audio effects simulating auditorium, arena, hallway, stone room and so on.

The 10-band Equalizer can help users modify the frequency response or tone of their audio system. You can also select from a group of factory presets or save user defined presets.

Support VOIP Skype

Connect a stereo headset with microphone to use VOIP, Skype or other internet telephony or online chat or messaging services like Yahoo or MSN on your laptop or PC to instantly communicate with friends and family.

External Audio Volume/Mute Control By Push Buttons

Not like the built-in sound card from laptop or desktop PCs, users can push buttons for volume up/down and pause the audio out. This USB 2.0 audio adapter is featured with external audio volume/mute control by push buttons with green/red LED status indication. Green light means ready in operation mode. Red light means the audio being muted.

Line/Headphones Output

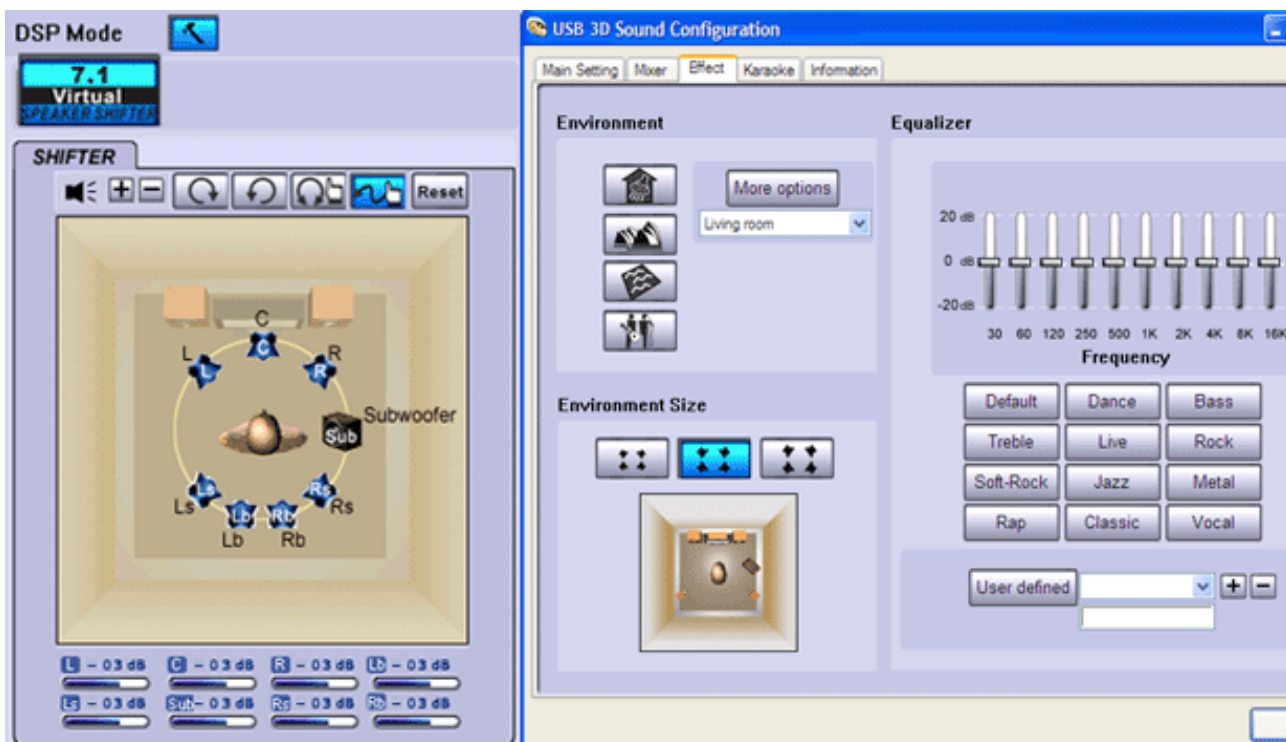

The analog line-level output can drive external line-level recording devices, powered speakers or stereo headphones.

Universal OS Support For PC/Mac/Linux

This USB audio sound card is able to support all computer operation systems including Windows 7, Vista, XP, 2000, ME, 98SE, Linux and Mac OS.
