

Corona Postfix Adapter V2 for XBOX 360 Slim Console

Features:

- This new POST FIX V2 compared to V3 and V4, this new V2 allows you a much easier and better tuning of POST OUT and a better boot rate.
- The Corona POSTFIX Adapter V2 is yet another fantastic solution from Team Xecuter.
- It clips directly without any welding onto the CPU and breaks out the POST_OUT1 pin to an external QSB so that it can easily be soldered to.
- This is perfect for installs to Corona v3 and Corona v4 where all the POST points have been removed and the important POST_OUT1 is underneath the CPU and almost impossible to solder to.
- Using a high quality spring loaded pogo pin with a unique PCB clamp-style design - even a beginner can install this and have access to POST_OUT once more.
