

Matrix Glitcher V3 Corona with 48MHZ Crystal Oscillator

Description:

New Matrix Glitcher Corona V1 with 48MHZ Crystal Oscillator for Xbox 360 Small IC Modchip. Based on the GliGli Hack (a Reset type Glitch Hack), it works by sending precisely timed pulses to the console's processor until the booting of unsigned code is successful. Once this has been achieved, XeLL, the Xenon Linux Loader is booted.

It works on all versions of the X360 and X360 Slim motherboard (except Xenon motherboard) regardless of the Kernel version.

Features:

- Booting of unsigned code on Xbox 360 and X360slim
- Compatible with X360 Fat (except Xenon) and X360 slim
- With 48MHZ crystal oscillator built in the board
- Works with all X360 NAND programmers
- Compatible with all X360 kernel versions
- Quick installation (7 Wires on Slim or 6 Wires on Fat)
- Compact PCB size with easy to solder pads.
- Booting of X360 unsigned code within max of 2 minutes
- Matrix Design and Quality
- Easy to install

Made in China
