

# Matrix Glitcher V1 Chip for GliGli Hack & Design for Building Crystal Oscillator (Small IC)

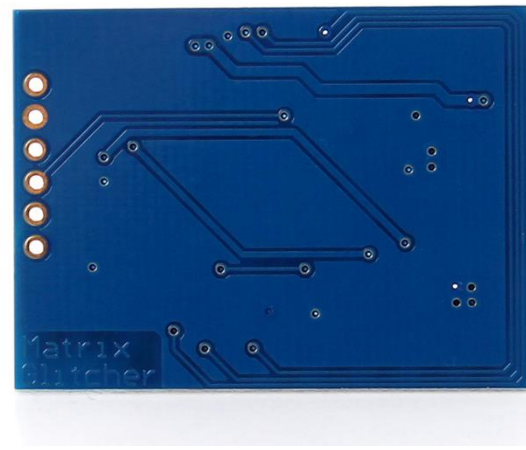

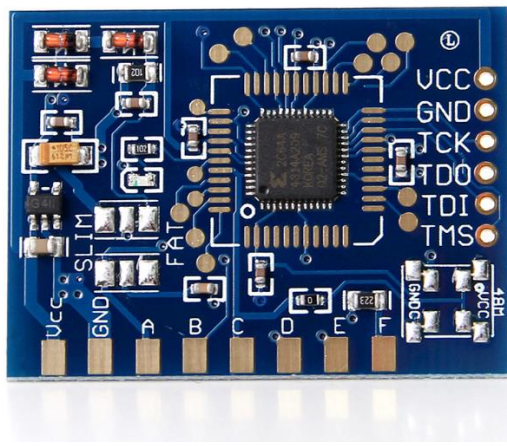

## Description:

One of the biggest issue faced by installers was the different behavior of the same models of Xbox360. To help them overpass this we added the possibility to beconnect the Glitcher 3 to a PC using the same Matrix External programmer already available with our Matrix Freedom PCB. Once connected to the PC it is possible to use the fine tuning software to try and identify the best timings for his own console.

## Features:

- New Matrix Glitcher 360 Corna V3, With 48MHZ crystal oscillator built in the board
- Compatible with both Phat(except Xenon) and Slim
- You are able to get glitcher and quartz generator with just one corona
- Works with all X360 NAND programmers
- Support all X360 kernel versions
- Matrix Design and Quality
- It has a quickly installation(7 Wires on Slim or 6 Wires on Phat)
- It is very fast,you just booting of xbox 360 unsigned code within max of 2 minutes.
- It is easy to solder pads and fast USB SPI 360NAND programmer
- Booting of unsigned code on Xbox 360 and XBOX360 slim
- Very fast booting speed - booting of X360 unsigned code within max of 2 minutes
- Now you can also use your X360 / X360 Slim if you have lost your DVD drive key
- Compatible with both Xbox 360 (except Xenon) and Xbox360 slim
- Compatible with all Xbox360 kernel versions
- Easy and fast installation - only 6 wires on Xbox 360 (phat) or 7 wires on Xbox360 Slim
- Compact PCB size with easy to solder pads
- Full update able with the Matrix NAND Programmer or with other Xbox360 NAND programmers
- Trusted Matrix design and quality

*Made in China*
