

1-8S LiPo Battery Voltage Tester/Monitor

Overview:

Managing your LiPo battery is a must. If you let your battery get to low you can diminish the capacity of your battery or even render it unusable. That's where the **1-8S LiPo Battery Voltage Tester/Monitor** comes in.

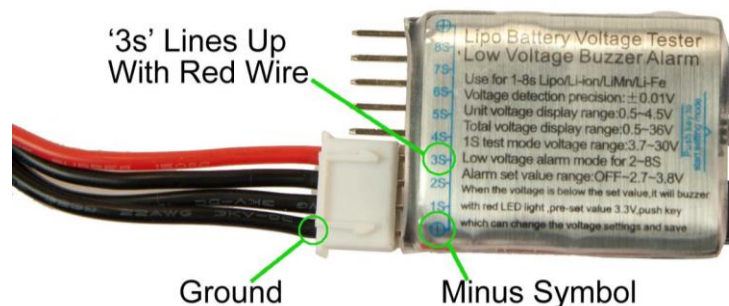

First, this unit can be used to test your battery's voltage. It will display the total voltage of your battery, then cycle through and display the voltage of each individual cell.

Secondly, the unit will monitor your battery and sound an alarm when one of its cells falls below a preset voltage. You can use the unit's pushbutton to set that voltage anywhere from 2.7-3.8V, or turn it off completely. This monitor mode will only work for 2-8 cell batteries.

The unit's pins are spaced at the standard 1"/2.54mm, so they will plug directly into LiPo batteries, breadboards and other standard devices.

Specifications:

- Voltage Detection Precision: $\pm 0.01V$
- Single Cell Display Range: 0.5-4.5V
- Total Battery Display Range: 0-36V
- 1S test mode Range: 3.7-30V
- Low Voltage Alarm Mode: 2-8S
- Selectable Alarm Range: Off/2.7-3.8V
- Preset Alarm Value: 3.3V
- Pin Spacing: 1"/2.54mm
