Also, have switch for change of connecting port between ATmega2560 and ESP8266

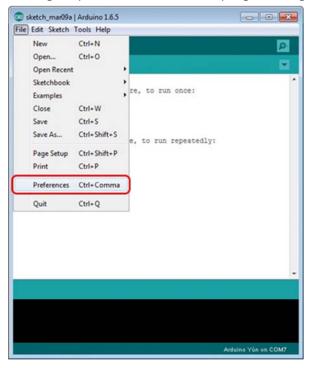

After choosing the mode of the board can proceed to set up the IDE

It is important that when the ESP8266 module is programming, it is necessary to press the button "Mode"

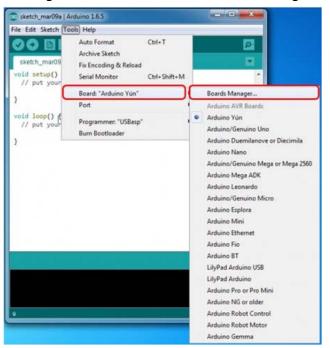

To begin open the Arduino IDE programming environment and go to settings

Then in the window that appears in the row, Additional Boards Manager URLs additional scripts that would work with the modules ESP8266 and click OK
