

# ***LVDS to VGA Converter with LCD/LED TV Motherboard Tester Model:TV160-6***

## **Description:**

During LCTV maintenance and production, the mainboard is required to be connected to a screen for testing.

However, due to miscellaneous mainboard specifications, various screens are required for maintenance or production. Taking this into consideration, this converter is able to display LVDS from the mainboard directly or convert it into VGA for output. Besides, it is able to be connected to a display screen for maintenance and commissioning.

## **Features:**

1. Furnished with 4.3" display screen, it is able to display LVDS image directly from the mainboard, supporting external VGA.
2. It supports LVDS signal with various resolution ratios (60Hz, 120Hz and 240Hz) of single or dual shielded wire.
3. It outputs uniform VGA signal (1280\*720/60HZ) which is able to be connected to various display, supporting CRT, liquid crystal and TV display (favorable compatibility).
4. The input interface features anti-static design with better anti-static capacity.
5. Convenient conversion among various LVDS formats.
6. Wide power input design, with 5V-12V adapter.
