

# ***ESD SMD Soldering Station Double Soldering Iron Clip Tweezers Model: GORDAK 902***

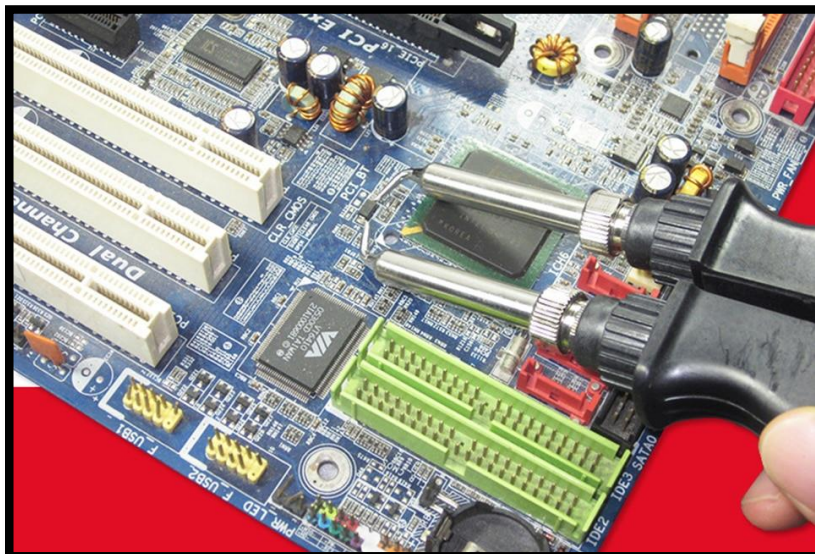

## **Description:**

Constant temperature adjustable welding table-902, is a double soldering iron at the same time, welding at a constant table temperature, which facilitates multi-point welding or welding of components, chips, etc., more than double its efficiency. In addition, another high performance, that is, two glands can be replaced with different iron heads (for example, an inclined flat head and a pointed head) to facilitate demand and work at the same time. Power: 75 W, temperature: 200-480 °C, full copper wire converter.

## **Features:**

1. Antistatic, dual-core control circuit design.
2. Double heating of pipes, direct contact with components, does not affect the surrounding components.
3. Suitable for dismantling and welding printed circuit boards with tight components.
4. It can be used in conjunction with multiple welding platforms to safely remove sheet resistance capacitance and SOP components.

*Made in China*
