

NVMe PCIe M.2 NGFF to SSD Adapter Card for Apple Laptop Model: N-941 A

Description:

This riser card supports the 2280 PCIe x4 and PCIe x2 protocol M.2 NGFF SSD converted to the 2013 2014 2015 version of the Apple MacBook AIR and PRO A1465 A1466 A1502 A1398 hard drive. PCIe x4 and x2 M.2 NGFF SSD are divided into AHCI protocol and NVMe protocol. For Novice users, please use PCIe x2 or x4 AHCI hard disk. Experienced and capable users can use NVME protocol PCIe x4 M. 2 NGFF SSD installation.

About using AHCI protocol hard disk or NVME protocol hard disk, it is up to the user's choice, has nothing to do with the adapter card!

Novice users are advised to purchase PCIe x4 or PCIe x2 M.2 NGFF AHCI SSD with this adapter card! Because the disk installation system of the AHCI protocol is relatively less restrictive, note that the AHCI data transfer protocol is not a SATA data transfer protocol.

Compatibility:

This product only supports the following computer models:

Late 2013 version MacBook Pro retina A1398 A1502 (ME864 ME865 ME866 ME293 ME294)

2014 version MacBook Pro retina A1502 A1398 (MGX72 MGX82 MGX92 MGXA2 MGXC2)

2015 version MacBook Pro retina A1502 A1398 (MF839 MF840 MF841 MJLQ2 MJLT2 MJLU2)

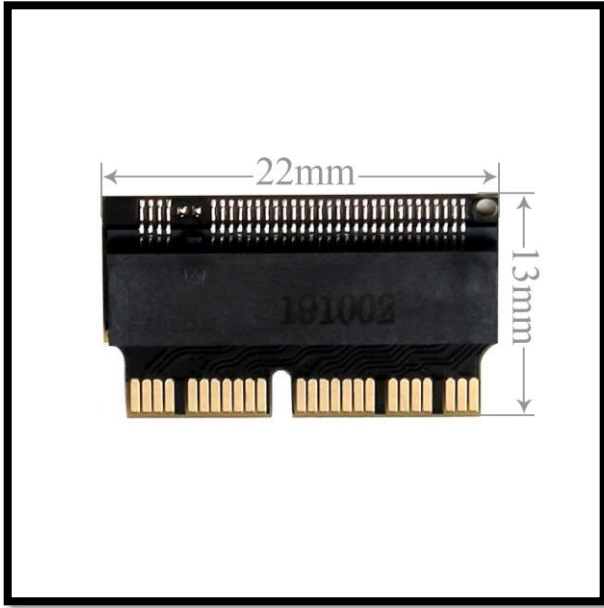

2013-2014 version MacBook Air A1465 A1466 (MD711 MD712 MD760 MD761)

2015 version MacBook Air A1465 A1466 (MJVM2 MJVP2 MJVE2 MJVG2 MMGF2 MMGG2)

Notes:

1. If the adapter card into the computer's SSD socket is not inserted in place, you can use a little bit of force, the Adapter Card needs to be inserted to the end.
2. It is wrong to use the SATA protocol M.2 NGFF hard drive to install.
3. The system installation disk must use version 10.14 or higher, the old version systems do not include NVME drivers.
4. If the hard disk partition format is wrong, it is not recognized when installing the system, you must have GPT (GUID) partition format. Be careful not to use any partitioning software of the windows system to partition the hard disk or partition the hard disk by the PE system, otherwise it will cause trouble for future installation work! You can use the Linux software such as the Ubuntu installation disk to partition the hard disk!
5. Do not install the system from the network, and do not try to use your original backup to restore the system, because the old and new versions of the Apple system disk format is not the same! Please download the Apple system, do a 10.13.6 Apple system installation disk, install from the USB disk.
