

# ***Modular Touch Sensitive LED Hexagonal Wall Light Warm White***

## **Description:**

This is a modular touch screen wall light. This design allows the users to effectively slide where they want or need light, turning the wall into a canvas and using their hands as a brush. The combination of modularity and lighting control is equivalent to a product that can be completely customized by the user. This product offers opportunities for lighting solutions specific to each environment.

A number of plastic hexagons can be joined together by magnets and interlocking patterns to form a touch screen wall light. The magnets that make up the physical connection between the components also allow current to flow from one to the other.

## **Features:**

- Many blocks LED light can be spliced together to make various shapes, shows gorgeous & amazing effects and creates romantic & joyful atmosphere.
- Touch: Each lamp can be independently controlled to open and close without affecting the normal use of other lamps.
- Hexagonal Design: Unique geometric hexagon is perfect for DIY, not only for lighting, but also can be composed of thousands of shapes to decorate your home.
- It can be combined freely and combined with different numbers of modules to create the desired pattern. It can be used as a lighting night light, or as a wall decoration art, adding a beautiful style to your home.
- If there is a problem with a light, you only need to replace the light that has the problem. You don't need to replace all the lights, so you can avoid your worries.
