

Diesel Engine Fuel Stop Solenoid Valve

Model: XHQ-PT-12

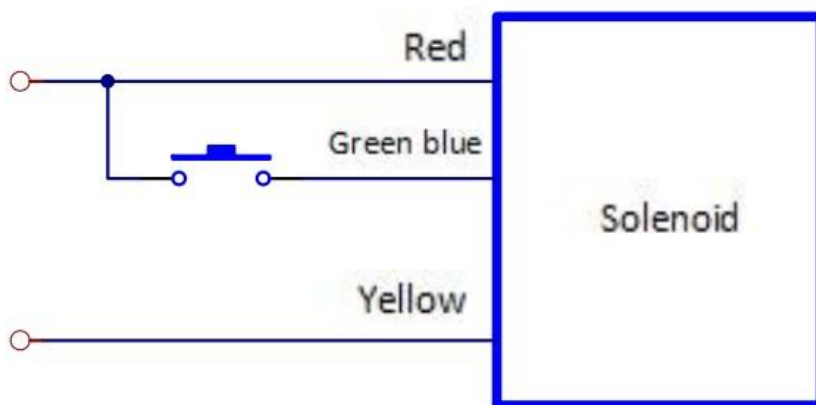

Description:

Solenoid XHQ-PT is used for diesel engine shutdown control, which can be applied to different types of diesel engines. Through the wire rope to apply force to the throttle lever of the diesel engine to make the engine shut down and automatically return to the position. It has the advantages of small working current, no heat, stable work and long service life.

Specifications:

Operating Voltage	12V (9-15V DC)
Full-Load Current	12V-2.0A (Automatic shut down the power when finish, operating current <15mA)
Control Line Operating Current	<15mA
Operating Stroke	53±1mm
Max. Tension	90N
Environmental Temperature	-30°C~60°C
Reaction Time	≤2 sec
