

Laptop CPU Cooling Fan Heat sink

Description:

Fans are most commonly used for air cooling. A computer fan may be attached to the computer case, remove the waste heat produced by computer components, to keep components within their safe operating temperature limits. It protects your valuable data by keeping your CPU cool. The CPU Cooling Fan features efficient heat dissipation and low noise, perfect design for high compatibility and excellent component. This high quality CPU Cooling Fan is great for keeping the CPU and other components within their operating temperature range!

Features:

1. It protects your valuable data by keeping your CPU cool.
2. The CPU Cooling Fan features efficient heat dissipation and low noise Perfect design for high compatibility.
3. You can work as long as you like without overheating your computer.
4. Keep your computer cool and comfortable on your lap or at your desk with this CPU Fan.
5. High quality of material, which makes this CPU Fan Heat sink popular in the market.

Specifications:

Voltage	DC 5V , 0.50A
Condition	New laptop Cooling Fan for laptop (Heat sink is not included, only cooling fan)
Dimensions	6.7 x 5.7 x 1.2 cm (L x W x H)
Weight	29 g
Color	Black

Made in China
