

# Small RGB Amplifier

## Model: KY-AMP-3

### User Manual

#### Typical Application:

This LED RGB Amplifier can be used in conjunction with any 5V - 12V Color Changing (RGB) Strip Lights. This equipment cleverly amplifies and boosts the power RGB from the LED Controller to the Strip Lights. This Amplifier should be used if a desired Strip Light length exceeds 5 or 10 meters (depending on the transformer used) . It is simple to connect and works instantly when the color(s) are selected on the LED Controller. Connections are clearly marked on top of the Amplifier and care should be taken not to cross wire as the Amplifier may short circuit.
