

# ***Decoder Voice Telephone Module MT8870***

## ***Model: XD-61***

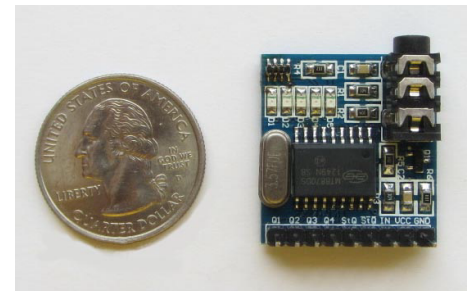

### **Description:**

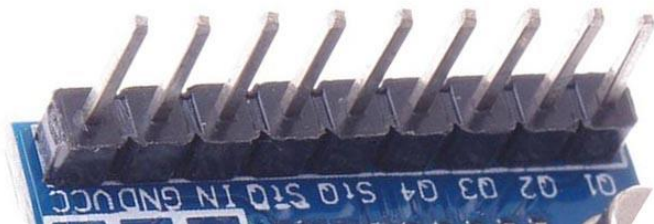

- The MT8870 module decodes DTMF signals from an audio source and it is suitable for remote monitoring applications, telephone answering machines and more.
- The IC is a low power device DTMF decoder chip. It is a complete DTMF receiver integrating both the band-split filter and digital decoding functions.
- This module is suitable for modem interfaces, mobile radios and other DTMF related applications.

### **Features:**

- On-board MT8870 frequency decoder chip.
- On-board audio input interface.
- On-board LED lights for output state indication.
- Main basic have lead to pin chip.
- PCB Size: 26.5x24.5 mm.

### **Pin-out:**

\*Note: this version of PCB design includes VCC & GND pins, please be cautious when using it!

*Made in China*
